This is one of several efforts being undertaken as a part of the State Information Planning Program to provide information and assistance to the State of Alabama and its regional and local units of government.

The preparation of this report was financed in part through federal grants from the Department of Commerce under Section 302 of the Public Works and Economic Development Act of 1965, as amended.

Abstract:

This publication contains annual population estimates for the years 1980-1990 by age (5-year intervals), race, and sex for all Alabama counties and the State.

POPULATION ESTIMATES & PROJECTIONS

ALABAMA AND COUNTIES
by
AGE, RACE AND SEX
1980 to 1990

These population estimates and projections for Alabama and counties are the result of an ongoing program of Population Estimation and Projection carried out by the Alabama State Data Center (ASDC) within the Center for Business and Economic Research, The University of Alabama. In conjunction with the office of State Planning and Federal Programs, the ASDC serves as the Governor's designated representative to the Federal-State Cooperative Program for Local Population Estimates and the Federal-State Cooperative Program for Population Projections. Both of these programs are long-standing activities of interaction and cooperation between the various states and the U.S. Bureau of the Census for the purpose of fostering and encouraging population research and activity.

Methodology

The basic methodology for deriving the demographic estimates and projections contained herein is the cohort-survival. Although this methodology has existed for many years, seldom has it been used to derive estimates (as opposed to projections) of population since the original methodology did

not incorporate symptomatic data subsequent to the most previous census year. For nearly 10 years, however, a number of population specialists have experimented with this methodology for producing estimates since it gives considerable demographic detail.

The Cohort-survival process normally operates with data from two census periods and assumed rates of vital events and migration. These assumed rates are used to carry the projection into the future. Variations to the original methodology utilized by ASDC include merging reported vital statistics for all available years during the postcensal projection period with assumed rates being used only for years not yet reported, development of county age-race-sex specific fertility and mortality rates, and controlling to exogeneous estimates of state and county population values during the intercensal period. Separate models of mortality, fertility, and migration provide the basic data elements utilized by the survival model in projecting the demographic events needed to produce the projected population.

All projections included herein are baseline projections. That is, the projections do not suppose occurence of events during the projection period other than those established in the trends of the preceeding period. These projections depict the path population growth (or decline) likely will take if events continue to develop as they have during the most recent past.

Exceptions to this rule might arise from military changes which do not derive from demographic forces. Examples are the introduction of new training programs into Ft. McClellan or the decline of flight training activity in Ft. Rucker during the 1970s. Such events often cause sudden and potentially drastic changes in the "level" of population of an area but are not appropriate for inclusion in population "trends" for the area. Construction of any type of new group quarters (for instance a new prison facility) during the projection period could have similar impact but would not be dealt with until the time the facility actually went into a use which caused a population level change for the area involved.

Baseline Data

These projections are predicated upon trends developed from the 1970 and 1980 Censuses of Population for Alabama. However, due to differing levels of undercount (the difference between the population actually residing in an area and the population enumerated in that area) in 1970 and 1980, the reported census populations could not be used by themselves to establish the trends. Information arising from involvement with the U.S. Bureau of the Census indicated that in 1970 the population of Alabama was probably undercounted by at least 125,000 persons. Furthermore, Bureau studies confirm that undercount rates differed by age, race and sex. Unfortunately, insufficient information exists to determine age/race/sex specific undercount rates for states or counties. In order to allocate the 125,000

persons to the various counties, rates established for the nation (see accompanying table) were used to adjust the 1970 populations of all counties and those adjusted values were then controlled to the state adjustment of 125,000. Insofar as the local rates of undercount differed from the national rates, the adjusted data may be closer or farther from reality.

While undercount in 1980 apparently did yield to the massive public relations campaign conducted by the Census Bureau, nonetheless there is considerable feeling among population specialists that some undercount survived. Discussions among population practicioners in other states have suggested as much as 2.0% to 2.5% undercount in the South. After much deliberation, the 1980 Census values for Alabama were adjusted upward by 2.0% FOR TREND ESTABLISHMENT PURPOSES ONLY. The effect of these two adjustments is to dampen the reported changes between 1970 and 1980 but to increase the level of the population projected by a net of about 50,000 persons. Note, however, the 1980 adjustment is for statistical purposes only and in no way implies a change in the "official" populations of Alabama and its counties.

Comparative Population Projections

As the enclosed projections were being finalized, two sets of population projections incorporating the 1980 Census were completed. The first set was produced by the Joint Center for

Urban Studies of MIT and Harvard University and published in an article in the March-April 1983 Harvard Business Review. The second set was produced by the U.S. Bureau of the Census and will be promulgated through their ongoing population projections publication program. These projections, along with those produced by the Bureau of Economic Analysis (OBERS series), are included in the following table for evaluative purposes. The

COMPARATIVE PROJECTIONS

STATE OF ALABAMA

1990 - 2000

AGENCY	1990	2000
BEA	4,155,000	4,350,000
Census	4,213,800	4,415,300
ASDC	4,352,200	na
MIT/HARVARD	4,612,000	na

SOURCES: See notes following the text.

respective projections have been ordered according to the level of the 1990 total for the state. The first three projections represent baseline type projections with the BEA set being the oldest and thus not having as current information included. The MIT/Harvard projections very much assume changing economic development as enumerated in the source article. From the above table, users of these projections should be able to form an

opinion of their application as well as to perhaps evaluate impacts of proposed "what if" conditions on future population change in Alabama and her counties.

Errata Sheet for Alabama Population Age, Race, & Sex, 1980-1990.

REPLACE the front page of Barbour County with a new page (see attachment)
Butler County, Back Page, Top Table, Total Female, 1980, should read 11583
Calhoun County, Back Page, Top Table, White Female, 1980, Age 0-4 should read 3216
Chilton County, Front Page, Top Table, Total Female, 1980, should read 15762
" " Back Page, Top Table, White Female, 1980, should read 13806
Choctaw County, Back Page, Top Table, White Female, 1980, should read 4853
Cleburne County, Back Page, Top Table, Total White, 1980, Ages 50-54 ... 657, 55-59 ... 565
Coffee County, Back Page, Top Table, White Female, 1980, should read 16088
Colbert County, Replace All of Front Page With Attachment
Colbert County, Back Page, Top Table, White Female, 1980, should read 23239
Conecuh County, Front Page, Top Table, Total Female, 1980, should read 6322
Crenshaw County, Replace All of Back Page With Attachment
Dale County, Front Page, Top Table, Total Female, 1980, should read 23009
Dale County, Back Page, Top Table, Total White, 1980, Age 35-39 should read 2358
Dekalb County, Front Page, Top Table, Total Female, 1980, Age 25-29 should read 3905
Dekalb County, Back Page, Top Table, Total White, 1980, Age 15-19 should read 4513
Escambia County, Replace All of Back Page With Attachment
Fayette County, Back Page, Top Table, White Female, 1980 should read 8464
" " , " " , " " , " " , 1980 should read 8790
Franklin County, Back Page, Top Table, White Female, 1980, should read 13987
Geneva County, Front Page, Top Table, Total Female, 1980, should read 12503
Geneva County, Back Page, Top Table, White Female, 1980, should read 10769
Henry County, Back Page, Top Table, Total White, 1980, Age 50-54 should read 539
Jackson County, Back Page, Top Table, White Female, 1980, should read 25020
Jackson County, Back Page, Top Table, White Female, 1981, should read 26320
Lamar County, Front Page, Top Table, Total Female, 1980, should

read 8434

Lowndes County, Back Page, Top Table, White Female, 1980, Ages 0-4 should read 100

Lowndes County, Back Page, Top Table, White Female, 1981, Ages 0-4 should read 100

Mobile County, Front Page, Top Table, Total Female, 1980, should read 189714

Mobile County, Front Page, Top Table, Total Female, 1980, Ages 0-4 should read 15183

Talladega County, Back Page, Top Table, White Female, 1980, should read 26334

The State of Alabama, Front Page, Top Table, Total Female, 1980, should read 2022354
